<b>Fruit Color</b>	Black/Brown

Abelia, which is native to China, is a shrub that may reach 1.5 m tall. Prefers warm and sunny locations. Many fragrant, small pink-flushed white tubular, funnel-shaped flowers appear all summer through fall. Abelias, by pruning, can be given nice shapes. They are evergreen in warm climates and deciduous in colder climates. The leaves are opposite or in whorls of three, ovate, glossy, dark green, and lighter green beneath, with serrated margins. Both sides of the leaves are glabrous. It is brown or reddish in fall. It is also cultivated in garden alongside the fence. Due to color change of leaves in fall and its flower value, abelia's visual value is highly appreciated.
